Текучий интерфейс (Fluent interface) - каскадный вызов функций.

Примеры:

- Doctrine ORM QueryBuilder (а также query builder других фреймворков)
- PHPUnit использует текучий интерфейс, чтобы создавать макеты объектов.

```
<?php
class Sql
  private array $fields = [];
  private array $from = [];
  private array $where = [];
  public function select(array $fields): Sql
      $this->fields = $fields;
      return $this;
   public function from(string $table, string $alias): Sql
      $this->from[] = $table . ' AS ' . $alias;
      return $this;
   public function where(string $condition): Sql
       $this->where[] = $condition;
      return $this;
  public function __toString(): string
       return sprintf(
           join(', ', $this->fields),
           join(', ', $this->from),
           join(' AND ', $this->where)
$query = (new Sql())
   ->select(['foo', 'bar'])
   ->from('foobar', 'f')
   ->where('f.bar = ?');
```
